EDITOR'S PREFACE.

THE Catalogue of Indian Coins, of which the present volume is the first instalment, will consist primarily of five volumes, of which two, those dealing (1) with the coins of the so-called Patán Sultáns of Dehlí, and (2) with the contemporary issues of the Kings of Bengal, Jaunpúr, Gujarát, and other Arabic coinages, will be the work of the author of the Catalogue of Oriental Coins, Mr. Stanley Lane-Poole, while the earlier series, Greek-Indian and Hindú, will be comprised in two volumes by Prof. Percy Gardner; and I shall myself undertake the description of the currency of the Emperors of Dehlí of the House of Bábar.

The general principles upon which the Catalogue of Indian Coins will be arranged will be similar to those which have been observed in the Greek and Oriental series, but the tabular or column-arrangement which was used in the eighth volume of the Oriental Catalogue will be retained in preference to the open pages of the earlier volumes of that series, save when the length of the inscriptions render the open page necessary.

The coins included in the present volume correspond to Fraehn's Class XVII.

The metal of each specimen is stated, and its size in inches and tenths of inches. The weight of the gold and

silver examples is given in English grains. Tables for converting grains into grammes, and inches into millimètres as well as into the measures of Mionnet's scale, are given at the end of the volume.

A comparative table of the years of the Hijrah and of the Christian Era has been added with a view to facilitating reference to the standard works on Indian history where the European computation is adopted.

Typical specimens are figured in the nine plates, which are executed by the autotype mechanical process from casts in plaster.

The work has been written by Mr. Stanley Lane-Poole, and I have carefully revised it throughout, except in the case of the Nágarí inscriptions, which have been collated by Mr. Gardner.

REGINALD STUART POOLE.

INTRODUCTION.

THE present volume comprises the coinage of the Sultáns commonly known as the "Patán" or "Pathán" Kings of Dehlí. With some reluctance I have abandoned this time-honoured designation, for the reason that the word Patán is synonymous with Afghán, and most of the Sultáns of Dehlí were not Afgháns. The founder of the line of Dehlí, Muhammad ibn Sám, was a *Ghórí Turk;* and his successors, the rest of the first dynasty, were his Turkish slaves and their offspring. The second dynasty, sprung from Jalál-ad-dín Fíróz Sháh, was composed of *Khaljí Turks.* The third dynasty, that of the Taghlak-Sháhís, was of the race of the *Játs.* The fourth claimed descent from the Arab Husain, grandson of the prophet Muhammad, and called itself by the sacred title of *Sayyids.* Indeed, only the fifth and the sixth of the dynasties into which the kings of Dehlí are divided could properly term themselves Patán or Afghán, inasmuch as Buhlól belonged to the Lódí tribe of Afgháns, and Shér Sháh to the Súr division of the Lódí tribe. Thus, out of forty Sultáns of Dehlí, eight alone have any right to be called Patáns or Afgháns. If, therefore, the name is to be retained at all in this misleading connection, it can only be in deference to long-established usage. The gain in convenience, however, in thus preserving the appellation, is surely more than counterbalanced by the historical and ethnological accuracy which is restored by its abolition.

The series of coins struck by the Sultáns of Dehlí offer fewer points of interest and importance than do most of the currencies of Muhammadan States. As a rule we may

look upon Muhammadan coins as the surest foundations for an exact history of the dynasties by which they were issued. The coins of a Muslim ruler generally go far to establish those outward data in regard to his reign which Oriental historians too often neglect or misstate. The year of accession, the extent of his dominion, his relations with the neighbouring powers and with the spiritual chief of his religion, are all facts for which we may look with confidence to his coins. In many of the smaller and less known dynasties it is hardly too much to say that the coins are our chief informers. Unfortunately we cannot claim this importance for the issues of the Sultáns of Dehlí. The history of this dynasty has been recorded in detail by native writers, to whose statements the coins can add but little that is new or valuable. Now and again the coinage may suffice to establish the truth about a disputed date, but such examples of usefulness are rare in the series. Moreover, owing to the habit with weak rulers, whose tenure of power was unusually precarious, of protecting themselves behind the ægis of a renowned predecessor, and issuing their coins in the name of a deceased but revered Sultán, it is not always easy to feel assured that the dates on the coins represent precisely what they profess; and to arrange the order and years of the succession by these dates, without reference to the histories, would create no little confusion. Almost the only piece of historical information which has been thought to be derived from the coins alone is the presumed issue of the piece No. 85 in this volume, by Násir-ad-dín Mahmúd, the eldest son of Altamsh, during his father's lifetime. This would doubtless be interesting if it were established, but the result of a careful examination of the facts has led me to reject, with all diffidence, Mr. Thomas's attribution. Two sons of Sultán Altamsh bore the title of Násir-ad-dín; the elder was governor of Bengal from 624 to 626, when he died: the younger, born in the year of his

brother's death, became Sultán of Dehlí after Mas'úd Sháh, and reigned from 644 to 664. Mr. Thomas ascribes the coin No. 85 to the short government of Bengal by the elder Násir-ad-dín, on the ground of the occurrence upon it of the name of the 'Abbásí Khalífah Al-Mustansir, who reigned from 623 to 640. The improbability of the governor's striking coins in his own name, without any acknowledgment of his father, the reigning Sultán Altamsh, together with the close resemblance between this coin and those which undoubtedly belong to the younger Násir-ad-dín, led me to class No. 85 among the latter's coinage, and to regard the anachronism of the Khalífah's name as merely an instance of the not unfrequent posthumous use of names on Dehlí coins. Since coming to this decision, I notice that Dr. A. F. R. Hoernle* has arrived at the same conclusion, and has supported his view by some cogent arguments, the substance of which I here reproduce. In the first place, no Governor of Bengal, unless he had thrown off the yoke of Dehlí, ever substituted his own name for that of his master the Sultán. The utmost a governor might do was to add his name after his master's, as Yildiz did after Muhammad ibn Sám's. Secondly, coins probably struck in Bengal, and clearly dated 624, do not bear Násir-ad-dín's name. It is evident that when the latter styles himself *Sultán*, and puts his own name exclusively on the coin, he does not do so as a mere governor. Moreover, the publication by Dr. Hoernle in the same article of a coin of 'Alá-ad-dín Mas'úd, with precisely the same obverse, including the peculiar ﷺ and the omission of the article before *Sultán*, seems to put it beyond a doubt that Násir-ad-dín copied his obverse from his immediate predecessor, at first, and that the coin No. 85 was his earliest issue. Neither the coin of Mas'úd nor No. 85 have any trace of marginal inscriptions or dates.

* *Journal of the Asiatic Society of Bengal*, vol. l., 1881, pp. 62—65.

A certain historical value attaches to the joint issues of Fíróz III. and his sons Fath and Zafar, as confirming the notices of the historians. Fíróz "invested his son Fath with the insignia of royalty in 760, and placed his name, in conjunction with his own, on the public currency," as Ferishtah records; and the Egyptian Khalífah Al-Mu'tadid sent a robe of investiture to the young prince. All this is confirmed by the inscriptions on the coins, where we find the names of the Sultán and his son and the Khalífah conjointly on all specimens. On the other hand, while the coins also corroborate the statements of the historians as to the succession of Zafar, another son of Fíróz III., to Fath's place, on the death of that prince, the value of the numismatic data is considerably diminished by the occurrence of one of those too common instances of posthumous issues which destroy to some extent the trustworthiness of the Dehlí currency as historical evidence. No. 387 bears the date 791, when Zafar was no longer alive: and the hypothesis of Mr. Rodgers that it may refer to a son of Zafar, who bore the same name, seems far-fetched.

The coinage of the Sultáns of Dehlí is more valuable from the point of view of political geography. Mr. Thomas, in his classical account of the *Chronicles of the Pathán Kings of Dehlí*, thus describes the first foundation of the dynasty, and the beginning of the acquisition of that wide dominion which reached its greatest extent under the famous Muhammad ibn Taghlak.

"The later scions of the dynasty of Sabaktagín, driven out of Ghazní on its sack by 'Alá-ad-dín Husain Jahánsóz in A.H. 550, retired to Láhór, and had already, in effect, become domesticated Indian sovereigns; so that, as Mu'izz-ad-dín pressed down and around them, the occupation of the more advanced provinces of Hindústán followed as a natural sequence. Mu'izz-ad-dín Muhammad ibn Sám, or Shiháb-ad-dín as he was called in his youth, otherwise

known as Muhammad Ghórí, the founder of the Pathán dynasty of Dehlí, is first noticed in history on the occasion of his nomination, in conjunction with his elder brother, Ghiyás-ad-dín, to the charge of a province of Ghór, by his uncle, the notorious 'Alá-ad-dín Husain Jahánsóz. After the accession of Ghiyás-ad-dín to the throne of Ghór, in 558 A.H., Mu'izz-ad-dín, acting as his general, subdued portions of Khurásán; and, on the conquest of Ghaznín in 569, he was nominated by his suzerain brother to the government of that country. From this time his incursions into India commenced: in 571 he conquered Multán; in 574 he experienced a sanguinary defeat in an expedition against the prince of Nahrwála; next, Khusrú Malik, the last of the Ghaznavís, was assailed, and at length in 583 captured by stratagem. In 587, in a more extended expedition into Hindústán, Muhammad Ghórí was totally routed on the memorable field of Thaneswar by the Chohán leader, Prithví Rája of Ajmír. After a year's repose, the disgrace of this defeat still rankling within him, he, on the self-same battle-ground, again encountered his former adversary, now supported by the whole force of the country, the confederated armies of 150 princes. This time fortune favoured the Ghórís, and a hard-fought field terminated in the total discomfiture of the Indian host. By this single victory the Muhammadans may be said to have become the virtual masters of Hindústán. The ulterior measures for the subjugation of the country were of speedy accomplishment, and most of the later additions to the Indian empire of Muhammad Ghórí were perfected by his quondam slave, subsequent representative in Hindústán, and eventual successor on the throne of Dehlí, Kutb-ad-dín Aibek. Ghiyás-ad-dín, who had long retained little beyond the title of a king, died in 599 A.H., and shortly afterwards Mu'izz-ad-dín was installed in form. An unsuccessful attempt at conquest in the north, in itself attended by most disastrous

results, was succeeded by the revolt of the governors of Ghazní and Multán: this outbreak, however, was soon suppressed. In the month of Sha'bán, A.H. 602, Muhammad Ghórí was slain in his tent, in the centre of his own camp, by a band of Gakkars. At his death, the Muslim empire of India extended generally over nearly the whole of Hindústán proper, Sind, and Bengal. The sovereignty was, however, held by very exceptional tenures, and was most indeterminate in its inner geographical limits."*

This wide empire, although it underwent many temporary retrogressions, gradually advanced in extent up to the time of Muhammad ibn Taghlak, when, according to the account of Siráj-ad-dín 'Umar of Oudh,† it included the following provinces:

Dehlí.	Oudh.
Deógír.	Kanauj.
Multán.	Lakhnautí.
Kohrám.	Bihár.
Samánah.	Karrah.
Siwistán (Sehwán).	Málwah.
Úchh.	Láhór.
Hánsí.	Kalánúr.
Sirsutí.	Jájnagar.
Malabár.	Telingana.
Gujarát.	Dwára Samundra.
Badáón.	

A reference to the map of India, facing page xvi, will show the vast extent of the dominion included in these provinces. But the elements of dissolution are always present in a huge and disconnected congeries of states. Muhammad ibn Taghlak, in spite of his extraordinary perversity, was no ordinary ruler, and he, if any one, had the will and the power to hold his unwieldy empire together. But the circumstances were too strong even for his iron resolution.

* E. Thomas: *Chronicles*, pp. 10—12.

† Notices et Extraits, xiii. 170, *cf.* Thomas, p. 203.

"The dominion covering twenty-three provinces, or independent nationalities, became, in the very number of its sections, essentially incoherent. Local feudatories had of late been superseded by governors appointed by the head of the state, and the selection of fitting and trustworthy representatives was attended by far greater risks than of old, now that the national bond, so effective among the ruling classes under the dynasty of the Turks, had disappeared amid the dissensions of Turk and Khiljí, both of whom had henceforth to bow to an alien Sultán of curiously mixed breed. In the Muhammadan distrust of unconverted Hindús, all manner of foreign adventurers were installed in divisional posts: these men, having little or no interest in the stability of the throne, were ever ready to aid any projected rising or to join with their combined forces any of the more influential rebels. So that the annals of the period present a mere succession of outbreaks,—no sooner was one section of the empire brought back to its allegiance than another division would seek to assert its independence.

"The Sultán was often obliged to command his own armies; and though he was usually victorious, the very fact of his absence in distant parts encouraged the disaffected elsewhere. The old proverb, 'Dehlí is distant,' found a new application; the royal forces were often less near to the threatened point than the inconveniently situated capital itself, whose distance from the southern states had already suggested its supersession by the more central Deógír. A parallel obstacle to the permanent subjection of the provinces was to be found in the state of the roads, and the general insecurity of the country at large, evils that extended to such an extreme that the tribute of the south was allowed to accumulate at Deógír, merely because it was found impossible to transport it to Dehlí, and eventually the whole treasure was divided on the spot among some temporarily successful insurgents.

"The end of such a state of things might easily be predicted. The Bengal mints occupied themselves in coining money for independent rulers; the Sultán's early triumph, Warangol, reverted to its ancient name in the hands of other masters; Deógír, his chosen capital, submitted to Hasan Gángú, the founder of a new race of Kings, the Bahmaní Dynasty of Kulbarga, who were destined to play a prominent part in the destinies of the country; and finally, the owner of so many kingdoms died miserably of a fever, near Thata, on the lower Indus, with his army, "like ants or locusts" around him; and his cousin and successor found some difficulty in getting safe home to the cherished Dehlí, which Muhammad ibn Taghlak had once done so much to desolate and destroy."*

Less than fifty years afterwards, the reigning Sultán of Dehlí, Mahmúd ibn Muhammad, was confined to the capital itself, hemmed in by rival pretenders to the throne from which Muhammad ibn Taghlak had dispensed his erratic notions of law to so immense an empire: and after Tímúr's invasion, 801 A.H., the kingdom of Dehlí was distributed piecemeal, and Ikbál Khán held Dehlí and the Doáb; Zafar Khán, Gujarát; Khizr Khán, Multán, Daibalpúr, and Sind; Khawájah-i-Jahán, Kanauj, Oudh, Karrah, Dalamau, Sandalah, Bahráich, Bihár, and Jaunpúr; Mahmúd Khán, Mahobah and Kálpí; Dilawar Khán, Dhár; Ghálib Khán, Samánah; and Shams Khán, Bíána. Shér Sháh for a moment gathered together once more the fragments of the empire; but it was reserved for Akbar to rebuild the fabric in more than its ancient grandeur.

The coins are of some value in tracing the variations in the empire which thus rose and fell with such astonishing rapidity. With a view to supplying the data they afford in the manner most convenient for reference, I have

* E. Thomas: *Chronicles*, pp. 203–206.

arranged the known mints of each Sultán in the following table, including not only the British Museum examples, but those in Mr. Thomas's *Chronicles*, and in Mr. C. J. Rodgers' supplementary papers in the *Journal* of the Bengal Asiatic Society, vols. xlix. and li.

TABLE ILLUSTRATING THE EXTENT OF THE EMPIRE BY THE MINTS.*

589—602	Muhammad ibn Sám,	Ghazní, [Kanauj,] *Peshawar*, FARWÁN.
	Yildiz,	Ghazní.
607—633	Altamsh,	Dehlí, Multán, Narwar? LÁHÓR?
634—637	Rizíyah,	Lakhnautí.
637—639	Bahrám Sháh,	Dehlí.
639—644	Mas'úd,	Dehlí.
644—664	Mahmúd I.,	Dehlí.
664—686	Balban,	Dehlí.
686—689	Kai-Kubád,	Dehlí.
689—695	Fíróz II.,	Dehlí.
695	Ibráhím I.,	Dehlí.
695—715	Muhammad Sháh I.,	Dehlí, *Deógír*.
716—720	Mubárak I.,	Dehlí, *Kutbábád* (i.e. Dehlí ?).
720	Khusrú,	Dehlí.
720—725	Taghlak I.,	Dehlí, Deógír, TALANG.
725—752	Muhammad ibn Taghlak,	Dehlí, Satgáon, *Sonárgáon*, Agrah, Taghlakpúr (i.e. Tirhút ?), Daulatábád and Deógír, Sultánpúr, (i.e. Warangol,) Lakhnautí (i.e. Gaur).

* Mints in the National Collection are printed in roman letters; those from Mr. Thomas's *Chronicles*, in italics; while those from Mr. Rodgers' papers are printed in small capitals.

752—790	Fíróz III.,	Dehlí.
790—791	Taghlak II.,	Dehlí.
792—795	Muhammad III.,	Dehlí.
795	Sikandar I.,	Dehlí.
795—797	Mahmúd II.,	Dehlí.
797—802	Nasrat,	Dehlí.
824—837	Mubárak II.,	Dehlí.
837—847	Muhammad IV.,	Dehlí.
847—855	'Álim,	Dehlí.
855—894	Buhlól,	Dehlí, Jaunpúr.
894—923	Sikandar II.,	*Dehlí.*
923—930	Ibráhím II.,	
946—952	Shér Sháh,	Dehlí (Jahánpanáh), Sharífábád, Shérgarh, Agrah, Gwalior, Shérgadah, Kálpí, Hisár, *Rantambhór, Chunár, Biáná, Nárnól, Bhánpúr,* Sambhal, Alwár, Ujain.
952—960	Islám Sháh,	Agrah, Gwalior, Satgáon, *Shakk-i-Bakar, Sharífábád, Shérgarh.*
960—961	Muhammad 'Ádil,	Nárnól, *Gwalior.*

Some of these mints have prefixes. Dehlí is generally adorned with the epithet حضرة; but sometimes دار الملك is substituted, and rarely تخت گاه. The last appellation is also given to Daulatábad; اقليم is prefixed to Taghlakpúr, ساهه to Jaunpúr, قلعة to Deógír, and بلدة or بلد to Ghazní.

Some mints have double names: e.g., دار الاسلام or دار الخلافة, or جهانپناه, or قطباباد, stands for Dehlí; دیوگیر and دولتاباد are synonymous; whilst سلطانپور represents Warangol, and تغلقپور probably for Tirhút. The appear-

ance of Jaunpúr as the second mint of Buhlól is interesting when it is recollected that it was this Sultán who re-annexed Jaunpúr in 893 after it had been independent for a century.

It will be noticed that the names of several of the Sultáns are absent from the preceding table. This is owing to various causes; Aibek, for instance, is not known to have struck any coins at all; Abu-Bakr, Sikandar II., Ibráhím II., etc., issued coins without stating the names of the mints; while Daulat Khán Lódí and Khizr Khán, in the general confusion which accompanied the invasion of India by Tímúr, preferred rather to trade upon the traditional credit of their predecessors than to make any demands upon the people's trust in their personal solvency, and thus issued their coins in the name of Fíróz III. or Muhammad III., the mints of which issues cannot be held to offer very trustworthy evidence of the extent of their strikers' dominion, which, however, we know from other sources to have been limited to a small district immediately surrounding Dehlí. Neither of these two puppets was a king in any real sense, and to such, "it mattered little whose superscription was placed on the public money,—his duty was confined to authorising the legality of the new issues by so much of his attestation as was implied in the annual date recorded on the reverse, . . . a system, indeed, which the East India Company, of their own free will, imitated with much credit and simplicity by striking their rupees in the name of Sháh 'Álam and other defunct monarchs of Dehlí, whose money had of old obtained good repute in the local bázárs. But as the progressive annual dates, which were needed to test the good faith of Oriental princes, came in process of time to be a source of confusion and an opportunity for money-changers, the Government adopted the expedient of selecting the best current coin of the day, and based their standard upon its intrinsic value; and so the immutable

date of 'the XIX *san* (year) of Sháh 'Álam' came to figure upon our much-prized 'Sicca Rupees.'"*

The chief importance of the coinage of the Sultáns of Dehlí lies in its bearing upon the currencies of India. It is before all things a series which attracts the metrologist. Any one who has studied Mr. Thomas's elaborate examination of the relations between these issues and the ancient Indian metric system will understand the value of the coinage of Dehlí in this respect. I do not propose to recapitulate here the results of Mr. Thomas's researches, which are easily accessible in his *Chronicles;* but a sketch of the principal developments of the coinage is necessary to a due appreciation of the various pieces described in the following pages.

In considering the general character of the Dehlí series, we must set aside the introductory issues of Muhammad ibn Sám and his lieutenant Yildiz, which are not only of very uncertain weights, but obviously indicate an attempt to carry on the Muhammadan system of large dirhams. The conqueror of Hindústán readily recognized the fact that it was not to such issues that he must resort in his dealings with his new Indian subjects. From time immemorial the staple of the currency in the northern provinces of India had consisted of small copper and *billon* (silver and copper) pieces, which later on came to be known from the locality as *Dehliwáls*. These, stamped with the traditional religious emblems, the Bull of Siva and the Kábul or Chohán horseman, would inevitably form the models upon which an adapted coinage must be based, if it were to obtain favour in the eyes of a conservative people. Accordingly, Muhammad ibn Sám issued Dehliwáls, with these emblems and his own name inscribed in Nágarí or Hindí characters

* E. Thomas: *Chronicles*, pp. 329, 330; *International Numismata Orientalia*, vol i, part 1, *Ancient Indian Weights*, p. 53 *f.*

of a rude type. So closely did he imitate the style of the preceding local coinage, or so scrupulously did he avail himself of the services of the old moneyers, that it has been found possible to attribute many of his coins to mints whose names are not recorded upon their surfaces, by indications of style and treatment of the devices. Similar reasons induced him to preserve, though only for a short time, the peculiar gold issues of Kanauj, with a rude figure of the goddess Lakhshmí, adding his name in Nágarí. The billon Dehliwáls, which for convenience are headed "Copper" in the present volume, retained their old important position in the currency of Hindústán through the greater part of the duration of the dynasty founded by Muhammad ibn Sám. They underwent various modifications, especially in the substitution of Arabic for Nágarí inscriptions; and there are minor differences in the form and position of the Bull Nandí and the Horseman, which have been noted. But the main fact, that a billon currency formed the staple of exchange in Hindústán, is undisturbed. Muhammad ibn Sám's conquests "were always associated with an adaptation, more or less complete, of the local currency; hence we find the peculiar type of the Ghórí Horseman retained in its own locality; the distinctive Kurmán outline [upright posture] of the Bull of Siva maintains its identity through succeeding foreign dynasties; . . . Ajmír, Dehlí, Multán, and Sind, each preserved, but little modified, a Tughra outline of the early device of the first Brahman Kings of Kábul,—the Cavalier with the reverse of the Sacred Bull."*

Side by side with this native coinage, a new and characteristic issue was introduced by Altamsh in the early part of the seventh century of the Flight. This was the silver

* E. Thomas: *Chronicles*, p. 36.

Tankah, which held its place as the standard silver coin to the end of the dynasty, and was so much approved that a gold Tankah, of equal weight, was added by Balban in the same century, which retained its position, with a brief interruption, for more than a century,—until, in fact, the precarious tenure of power by the Sultáns of Dehlí rendered any issue of gold coins incompatible with the state of the treasury. The Tankah, silver or gold, should weigh 175 grains, and the existing specimens bear out the estimate with tolerable accuracy. Seventy-five silver Tankahs in the British Museum, from Altamsh to Taghlak Sháh I., weigh collectively 12,550 grains, or a trifle over 166 grains apiece, which, allowing for wear and sweating, is a fair average. None of these 75 pieces fall below 161 (indeed only two fall below 163 grains), and some reach the weight of 171. The gold show an even better average, for 21 specimens in the British Museum, from Balban to Taghlak Sháh I., weigh collectively 3526 grs., which gives $167\frac{19}{21}$ as the weight of each, or just under 168 grs. One of these goes as high as 173, and only one falls below 164. Thus from the beginning of a regular silver coinage under Altamsh, about the year 632 of the Hijrah, to the time of Muhammad ibn Taghlak, A.H. 725, the Tankah was the standard of currency in the empire of Dehlí.

With Muhammad ibn Taghlak begins a series of innovations, which, although they were not destined to last long, introduced in their brief duration many curious and novel features into the currency of Hindústán. Muhammad Sháh is stated to have had some such change in contemplation with regard to the Tankah as Muhammad ibn Taghlak eventually carried into effect. He was anxious to strike a new Tankah of 140 grains, in order to pay his Sipáhís, or Sepoys, with as little expense as possible. This was the precise reduction which Ibn Taghlak effected. His new

'Adlís, or "equitable [coins]," as they were called,* for no very obvious reason, weighed 140 grains, and from A.H. 725 to 730 the new standard obtained throughout his empire. The British Museum specimens range from 137 to 151 grs., and give an average of 141 grs. In A.H. 730, however, Muhammad ibn Taghlak thought better of his reform, and other coins of that year maintain the old weight of 169 (for 175) grs. Simultaneously he had attempted an alteration in the standard of the gold Tankahs, which he raised to 200 grs., as witness the pieces of 197, 198, and 199 grs. in this volume. But this change was even more short-lived than that in the silver; it began in A.H. 726, and already in 729 and 730 the old Tankah of 175 grs. is again represented by gold pieces weighing 168, 169, and 171 grs.

But the most remarkable of all Muhammad ibn Taghlak's monetary enterprises was the attempt to introduce a forced currency of brass at the value of the Tankah. Such attempts at a fiduciary coinage had before been made by Oriental sovereigns. Khubilai Khán, the Mongol emperor of China, had succeeded in perfecting a very convenient paper currency in the Celestial empire; and the Mongol Ilkhán of Persia, Gai-khatu, with very different motives, had endeavoured to force a paper money upon his Persian subjects; but the strenuous resistence he encountered made an end of the fraud and of his own sovereignty. Muhammad ibn Taghlak's forced currency was of a different order. It was chiefly of brass, and the state of the treasury seems to have justified any system of nominal values, inasmuch as Ibn Taghlak could easily have redeemed the whole issue at the nominal prices. Indeed, when, after about three years, (730—732,) the trial proved unsuccessful, in consequence of innumerable imitations, against which the Sultán had organized no regal protective marks, Muhammad ibn Taghlak

* The name occurs on the coinage itself.

took up the whole brass currency, genuine and forged alike, at the values for which they were intended to pass. In such circumstances there can be no question of dishonesty on the part of the ruler. That he anticipated some reluctance on the part of his subjects to accept the brass currency as equivalent to the silver Tankah may be seen from the character of the legends with which the new coins were inscribed:—من اطاع السلطان فقد اطاع الرحمن "Whoso obeys the Sultán obeys the Compassionate;" اطيعوا الله واطيعوا الرسول واولى الامر منكم لا يولا السلطان كل الناس بعضهم بعضا "Obey God and obey the Prophet, and those in authority among you: sovereignty is not conferred upon all men; some of them (precede) others;" etc. At the same time, while thus appealing to the Korán for the inculcation of obedience to the powers that be, Muhammad ibn Taghlak was careful to let the people understand for exactly how much the new piece was intended to pass. Thus we find the inscription مهر شد تنكة رائج در روزگار بنده اميدوار محمد تغلق "Sealed as a Tankah current in the reign of the slave hopeful [of grace] Muhammad [ibn] Taghlak," and again مهر شد تنكة پنجاه كانى در روزگار الخ "Sealed as a Tankah of fifty Kánis," or Gánis, etc.; or ضرب الربعى "Struck [as] the fourth; الدرهم الشرعى "The legal dirham," النصفى "The half-piece;" عدل هشت كانى "Good [for] eight Kánis," or سكة دو كانى "Money of two Kánis," and finally چيتل امانى يكانى "A Chítal equal to one Káni:" but these varieties are not all represented in the National Collection. In Mr. Thomas's No. 201, I read سكة not تنكة.

In order to understand what these denominations mean, we must consult Mr. Thomas's* table of the Currency during the reign of Muhammad ibn Taghlak, here subjoined with some modifications in the arrangement.

* *Chronicles*, p. 219.

MUHAMMAD IBN TAGHLAK'S CURRENCY.

	Káni.	Du-káni.	Shash-káni.	Hasht-kani.	Duwáz-dah-k.	Shánz-dah-k.	Tankah.
Káni (or Chítal),	1						
Du-káni (or Sultáni)	2	1					
Shash-káni . .	6	3	1				
Hasht-káni . .	8	4	$1\frac{1}{3}$	1			
Duwázdah-káni .	12	6	2	$1\frac{1}{2}$	1		
Shánzdah-káni .	16	8	$2\frac{2}{3}$	2	$1\frac{1}{3}$	1	
Tankah (*old*, 175 grs.) . .	64	32	$10\frac{2}{3}$	8	$5\frac{1}{3}$	4	1

The ancient quaternary scale is here observable throughout: there are no fives or tens. The new *'Adlí* Tankah of 140 grs., however, correspond to 50 Kánis, and pieces of 25 Kánis were struck to subdivide it. Afterwards Fíróz Sháh III. appears to have introduced 2, 10, 24, and 48 Káni pieces.

On comparing the weights of the forced brass currency with the foregoing table, many difficulties present themselves. Mr. Thomas once seemed inclined to fix the denomination (only tentatively, it is true,) by the weights of the pieces described in his *Chronicles*. I am disposed to think that the weight had very little to do with the distinction of denominations. The brass coin intended to pass for a silver Tankah, and bearing an inscription stating so, does indeed carry a weight of 136 grs., nearly approaching the 140 grs. of the new 'Adlí Tankah, which, however, at the time of the forced currency, seems to have already been abolished in favour of the old 175 grs. Tankah, so that we should rather expect the brass coin to weigh 175 grs. But even if it were granted that the 140 Tankah is intended to be represented in weight by the brass pieces in question, the subdivisions show no correspondence in the matter of weight.

The piece marked 8 Kánis weighs 53 grs., which is neither an eighth part of 136 nor a 6¼ part, taking the two values of the old and new Tankahs (64 and 50 Kánis) into consideration. If the 136 brass Tankah is meant to equal 50 Kánis, the 8 Káni piece should weigh about 21 grs. Or if the brass Tankah of 136 grs. is intended to represent the old Tankah of 175 grs., the 8 Káni piece should follow a similar reduction in weight, and should hardly exceed 17 grs. Again, on whatever principle we accommodate the 8 Káni piece to the Tankah, it is impossible to give a satisfactory account, on the weight system, of the Du-káṇi piece, which weighs 25 grs., instead of 13, as it should if it is to bear any relation to the 8 Káni piece. Then there is a unique *Chítal* of copper, equal to 1 Káni, but weighing no less than 74 grs., which must upset all calculations. Nor is it easy, on the principle of a uniform scale of weights, to explain the pieces of 112 and 55 grs., which Mr. Thomas suggests may be 40 and 20 Kánis. Why should a 20 Káni piece weigh only 2 grs. more than an 8 Káni piece? A remarkable *Dirham Shar'î*, "Legal dirham," also appears in the series, which comes up to 80 grs., which no legal dirham ever did; while the *Nisfy* or half-dirham, (as Mr. Thomas terms it,) weighs no less than 103 grs.

I do not quote these weights under any impression that Mr. Thomas has ever sought to prove that the brass coinage was strictly adjusted to a regular scale of weights corresponding to those of the silver coins they were intended to supplant; indeed a remark of his (on p. 248) shows that he is perfectly alive to the discrepancies in the scale of weights; but I am anxious to state clearly that any deduction from the weights is likely to be fallacious, inasmuch as the closest examination reveals no system or graduated scale whatever. The lower denominations were lighter than the higher, and that is, I believe, all that can be formulated about them on the subject.

Another curious feature in the currency—not the forced issues—of this "Prince of Moneyers" is the striking of gold and copper coins in the sole name of the contemporary Khalífah of Egypt, the *fainéant* representative of the once powerful house of 'Abbás. The only parallel instance in the Dehlí series is the remarkable coin of Altamsh, No. 35, where only the Khalífah Al-Mustansir's name appears in the inscriptions.* From the earliest issues of the Sultáns of Dehlí, the spiritual lords of the Muslims were never neglected. Muhammad ibn Sám put the name of the reigning Khalífah of the yet surviving dynasty of Baghdád upon his silver coins, while the Nágarí letters श्री हमीरः, *Srí Hamíraḥ*, may perhaps stand for أمير المؤمنين *Amir al-mu-minín*, as the occurrence in the same position of the form श्री मलीफ, *Srí Shalípha*, i.e. *Al-Khalífah*, seems to show; though *Srí Hamíraḥ* might of course equally well represent *Al-Amír* simply, and refer to Muhammad ibn Sám himself. From the time of Muhammad ibn Sám to that of Fíróz II., the names of the 'Abbásí Khalífahs of Baghdád appear regularly on the gold and silver coins; and even so late as 695, forty years after the forcible destruction of the Baghdád Khalifate and the murder of Al-Musta'sim by Húlágú, the name of this ill-fated Pontiff is seen on the coinage of Dehlí. At last, however, the Sultáns of Hindústán seem to have realized that there could be little spiritual benefit in retaining the name of a Khalífah who had been dead for forty years, and accordingly from the accession of Ibráhím I. the coinage does not record the name of the Khalífah, but inscribes only a bare reference to his existence, in the Sultán's title *Násir Amír-al-mu-minín*, to which Muhammad I. added the title of *Yamín al-Khiláfah*.

The next alteration took place under Mubárak Sháh I.,

* E. Thomas, *Chronicles*, p. 46.

who, after beginning with the stereotyped *Násir Amír-al-mu-minín* of his predecessors, assumed the dignity of Khalífah himself, in the style الواثق بالله أمير المؤمنين, in 717, adding such other improvements as خليفة الله, خليفة رب العالمين and terming Dehlí the "Abode of the Khalifate," Dár al-Khiláfah. Khusrú Sháh styled himself ولىّ أمير المؤمنين, and Taghlak Sháh I. returned to the old form of Násir Amír-al-mu-minín. Then his son Muhammad introduced the crowning acknowledgment of the Egyptian Khalifate when he struck coins in which he omitted all mention of himself, and substituted the inscription "This Khalífatí dínár was struck . . . in the time of the Imám Al-Mustakfí," the then reigning 'Abbásí Khalífah of the restored line in Egypt. It was not apparently until this period, more than eighty years after the revival of the Khalifate in Egypt under the Mamlúks, that the Sultáns of Dehlí became aware of this restoration; and Muhammad ibn Taghlak certainly spared no pains to emphasize the discovery. After his brief issue of purely "Khalífatí" coins, in gold and copper, in the middle of the eighth century of the Flight, the name of the reigning Egyptian Khalífah appears regularly upon the Dehlí mintings, in conjunction with that of the Sultán, until A.H. 795; after which year the monarchs of Dehlí seem again to have become uncertain as to the names of the successive Khalífahs, and therefore contented themselves with simply inscribing the fact that there was a Khalífah of some name or another, without seeking to indicate his precise titles. The forms, "In the time of the Prince of the Faithful," فى زمن أمير المؤمنين, or "The Khalífah [is] the Prince of the Faithful," retained their place on the coinage until the time of Shér Sháh, with the variation of *Náïb Amír-al-mu-minín*. Shér Sháh abolished the style of Khalífah altogether from the coinage, with a due sense of historical accuracy, since the Egyptian Khalifate had by then been absorbed by

the Sultáns of Turkey, and the Sultán of Dehlí could not be expected to understand that the spiritual power thus transferred ought to be recognised in so remote a region as Hindustán. Shér Sháh, however, upheld the character of the Dehlí coinage for Sunní orthodoxy by inserting the names and epithets of the first four Khalífahs, Abu-Bakr, 'Umar, 'Uthmán, and 'Alí, and the example was followed by his successors to the close of the dynasty.

After the reign of Muhammad ibn Taghlak the coinage of the Sultáns of Dehlí greatly deteriorates. Only eight gold Tankahs are found in the British Museum collection after this monarch, and of these but one is later than Fíróz III., his immediate successor. The specimens in question are of the old weight of 167 to 170 grs. The silver also becomes greatly diminished. With the exception of a few posthumous silver Tankahs, struck chiefly by Khizr Khán in the name of Muhammad III., about 817, no silver coins occur in the British Museum between the death of Muhammad ibn Taghlak and the accession of Shér Sháh, an interval of nearly 200 years. Shér Sháh and his successors abolished the *billon* coinage, which had absorbed almost all the exchange of India, and restored the silver Tankah in its original weight of about 175 grs. The specimens in the Museum fall little below this figure.

The inscriptions on the coins of the Sultáns are unusually monotonous. Save in the phenomenal issues of Muhammad ibn Taghlak, the religious inscriptions are of the commonest order, and there are not many even of these. A few peculiar forms may be noticed: e.g., the complete form of the Profession of Faith اشهد ان لا اله الا الله الخ on 260—263; اطيعوا (Kur. xxxv. 15); والله الغنى وانتم الفقرا الله واطيعوا الرسول واولى الامر منكم لا يولا السطان كل الناس بعضكم بعضا (partly from Kur. iv. 62); and the benedictory formulas انار الله برهانه, اعلى اجره, and جل الله ظلاله وجلاله. The titles of the sovereigns of Dehlí are as monotonous as

their religious legends. They are all "Sultáns," and, after Bahrám, "Sháhs" also, and the almost universal epithet they add to exalt the former title is الاعظم. Down to the time of Muhammad ibn Taghlak, they hardly ever varied this formula, although Muhammad ibn Sám himself, when under his brother's suzerainty, began with the variety of المعظم. Original in his titles, as in everything else, Muhammad ibn Taghlak abandoned the cherished epithet, which Taghlak I. had already shaken by his occasional substitution of the epithet الغازى. Muhammad his son began his gold coinage with a posthumous coin in memory of his father, bearing the unprecedented series السعيد الشهيد الغازى. This he followed by various new titles, such as السلطان العادل, العبد الراجى رحمة الله, الواثق بتائيد الرحمن, الراجى رحمة الله الكريم, المجاهد فى سبيل الله, and the Persian بنده اميدوار, representing the Arabic العبد الراجى. After his time, the old formula returns once or twice, chiefly on posthumous issues in the name of Muhammad III.; but as a rule the later Sultáns of Dehlí were satisfied with the simple epithet, inaugurated by Fíróz II. (who also styled himself الواثق بتائيد يزدانى) of سلطانى, *Sultání* or *As-Sultání*, with "Lieutenant of the Prince of the Faithful," نائب امير المؤمنين, not unfrequently added. The Lódís abolished this title and called themselves المتوكل على الرحمن; and Shér Sháh and Islám Sháh adopted the style of السلطان العادل; or, on the copper issues, the very peculiar formula الامير الحامى الدين الدنان (or الحاكمى). Added to the first title are generally a *lakab*, such as Násir-ad-dín, and a *kunyah*, which is universally *Abu-l-Muzaffar*, whenever there is a kunyah at all, except in two cases when it is *Abu-l-Mujáhid*. Násir Amír-al-mu-minín is, as has been said, a common addition to these titles, from Altamsh to Muhammad I., and on the coins of Taghlak I. "Sword of the Prince of the Faithful," سيف أمير المؤمنين, occurs on the coinage of

Fíróz II., as does the form نائب أمير المؤمنين, which remains in use to the time of Mubárak II. The one Queen of the line, Rizíyah ibnat Altamsh, used the form نصرة أمير المؤمنين. So at least the specimen in the British Museum reads, and this is confirmed by a specimen described and engraved by Dr. Hoernle in the *Journal* of the Bengal Asiatic Society (1881). Mr. Thomas has read مهرة أمير المؤمنين from another example. The only other titles of importance occurring on the coins under review are those of Muhammad I., اسكندر الثانى يمين الخلافة; of Mubarak I., اسكندر الزمان, يمين الخلافة, soon changing to الامام الاعظم. . . الواثق بالله امير المومنين, and Khusrú Sháh's الواثق بنصر الرحمن ولى امير المومنين, where Mr. Thomas has read . . . الواثق بخير, which is not confirmed by any specimen in the British Museum.

The orthography of the name "Altamsh" demands a few words. I have followed Mr. Thomas in retaining the most usual spelling: but there can be no doubt that it is not the most accurate representation of the original Túrkí, whatever the meaning of that original may have been. There is generally a single stroke after the ت, and not infrequently another before the ل: so that the complete form would seem to be ايلتتمش *Íl-tutmish*. The Nagarí transcript लितितिमिसि *Lititimisi* agrees tolerably well with this restoration; and the meaning of Íl-tutmish, 'Hand-grasper,' 'Supporter,' 'Upholder,' is sufficiently appropriate. Mr. Redhouse, however, on the authority of Ahmad Wafík Páshá, suggests an alternative reading in ايلْتِيمش, from ايلتماك, 'to convey,' 'carry off,' *i.e.*, 'the kidnapped,' or slave who was 'carried off:' and adds that it might also be taken in the active sense, as meaning the 'carrier off' or ravisher (of the heart).

There are many points that might here be raised with regard to the origin and localization of the Brahmanical emblems and symbols, and the peculiarities of Nagarí palæography as exhibited on the coins: but these will

more appropriately be considered in the volume of the Indian Catalogue which will treat exclusively of the Hindú coinages.

I have already indicated two or three small matters in which I have been compelled reluctantly to differ from the opinion of Mr. Thomas, and it is necessary to enumerate a few more such minor differences. When there is merely a question as to how much of an undisputed inscription is legible, I shall not here discuss what is only an affair of eyes and microscopes. The rejection from the present volume of Mr. Thomas's No. 7 requires, however, some explanation, inasmuch as the coin exists in the British Museum. I reject it, because I am convinced that it is not a coin of Muhammad ibn Sám at all, but of one of the Ghaznawís, probably Khusrú Malik. The fabric alone, I think, shows it is no fellow to the issues of Muhammad ibn Sám, and the inscription, as I read it, confirms the rejection. No. 120 of the *Chronicles*, which is the same coin as No. 138 of the present volume, bears, according to Mr. Thomas, the date 680, which he adds is "clearly an error," with which I must concur, since I can only make it 695. Mr. Thomas's No. 121 presents a slight displacement of the inscriptions in the *Chronicles*, for the word امير should be in the middle line. In his No. 146, Mr. Thomas reads Dár-al-Khiláfah, where I find Dár-al-Mulk, but the two may not be of precisely the same issue. On the coins described under No. 297 by Mr. Thomas, I can find no distinct trace of the mint-name he gives. On p. 51 of this catalogue will be found a foot-note in which I venture to dissent from Mr. Thomas's reading of a posthumous coin of Taghlak I. The rejection of the presumed date on the reverse at once removes Mr. Thomas's No. 158 to the side of his No. 178, as a posthumous, and not as he supposed a contemporary, issue of that Sultán. The title *Ash-Shahíd* alone is, I think, enough to prove that Taghlak was dead when the coin was struck, for I cannot recall an instance of so very significant a title being assumed by a living king.

I may add, in reference to No. 73 in this volume, that I can find no trace of the بالله and حمد Dr. Hoernle refers to in the *Journal* of the Bengal Asiatic Society (1881).

In the arrangement of posthumous coins, as well as in some other minor details of order, I have departed from the pattern which is set, generally with excellent judgment, in the *Chronicles*. I class the posthumous coins under the king whose name they bear, and give a cross-reference in the place where they should come if the order were strictly chronological. The matter is merely a question of convenience; and I found that the coins were more clearly described and more easily compared in this order than if they had been placed where their dates demanded. Instances of this arrangement will be frequently met with in this volume, and the student must not be deceived by the classification into the belief that the Sultáns enjoyed preternaturally long reigns. By a contrary principle to that which prompted the issue of posthumous coins, Nos. 410—412 in this catalogue were struck by Muhammad III. before he actually became Sultán, when he was associated with his father Fíróz III. in the government. It would have been better if I had indicated this circumstance in the heading.

As coins, without reference to their historical or geographical or other relations, those of the Sultáns of Dehlí are singularly fine. Especially beautiful are the clear-cut gold issues of Muhammad ibn Taghlak, where the smaller superficies enabled a better impression to be struck with the die. But the chief test of a coinage is rather in the assay than in the calligraphy, though the latter is not to be despised upon Muhammadan coins, where the finer departments of the engraver's art could not be allowed free scope. Mr. Thomas has given some details of assaying experiments with the coins of Dehlí, and the result in the higher metals shows great regularity. Muhammad I.'s gold, for example, had a fineness of 94·2, and Fíróz II.'s of 94·5.

More interesting are the assays which Mr. Thomas had

made in India of the billon coinage, by the usual native process of blowing off the copper with lead. The following are some of his results:—

Twelve of Nasír-ad-dín Mahmúd's *dehliwáls*, with a collective weight of 584 grs., produced 149 grs. of silver, or 12·14 (nearly ¼th) apiece.

Various specimens of Fíróz III., (*Chronicles*, No. 228), weighing from 131·5 to 141 grs. each, contained irregular proportions of silver, ranging from 12 to 24 grs. apiece.

Four coins of Buhlól Lódí, weighing about 140 grs. each, gave 0 gr., 15·3 grs., 14 grs., and 6·7 grs., silver.

The average silver in the coins of Sikandar ibn Buhlól, from an assay of over thirty, was 5·64 in each piece, of an average weight of about 140 grs. each.

The subjoined tables of the genealogical relations of the various princes whose money is described in this volume, together with the map of mediæval India, will be useful to the student of this dynasty in its connection with the history of India at large.

In conclusion, I am glad to have this opportunity of expressing my thanks to Mr. Edward Thomas, not only for the assistance which every student of the coins of the Sultáns of Dehlí must derive from his learned and exhaustive *Chronicles*, but also for the kindness with which he has permitted me to examine his own annotated copy of that work, and has read the proof-sheets of this Introduction. I am also much indebted to Professor Percy Gardner for his supervision of the Nágarí inscriptions included in this volume, to Mr. Redhouse, Dr. Stickel, and MM. Tiesenhausen and Sauvaire, for various suggestions; while to the Keeper of Coins, in his minute and scrupulous revision of every line of the work, I owe many valuable corrections and improvements.

4		Horseman to left, with lance at charge. Inscription illegible.	السلطان المعظم غياث الد نيا والدين ابو الفتح محمد بن سام Æ ·55
5	[Láhór? Th.]	السلطان المعظم معز الدنيا و الدين	محمد بن سام Pl. I. (Th. 7.)† Æ ·55

* Small coins of the size and character of 4 and 5 abound in the Patán series. They are very seldom of pure copper, but usually of a mixture of silver and copper, in the proportions stated in various places in Mr. Thomas's *Chronicles*, and in the Introduction to this volume. The general designation of 'copper' has, however, been adhered to throughout, inasmuch as that metal always predominates.

† The title المعظم seems to indicate that Muhammad was still the lieutenant of his brother غياث الدين; after whose death, he adopts the form الاعظم.

B.—ALONE.

* See the *Chronicles of the Pathan kings of Dehli* for Mr. Thomas's reasons for ascribing this coin to an elder brother of Maḥmood, who died in 626. I am rather inclined to believe that the occurrence of Al-Mustansir's name is merely another instance of the use of an old obverse, of which many examples could be quoted. See *Introduction*.

* Mr. Thomas has read the letters following تغلقشاه as a date, ٧٢١. Apart from the improbability of a date in ciphers upon a gold coin of this period, and the fact that a different date (726) occurs in the marginal inscription, the letters themselves do not favour the supposition. The supposed ٧ is لا, and I believe the whole word is a badly written السلطان.

* An asterisk is prefixed to those coins which are only presumably Dehlí, the name itself being either obliterated, or else altogether absent. The epithet حضرت or حضرة (see note p. 35) is always prefixed to the name Dehlí, except in the thirty-five instances in which Dár-al-Mulk is prefixed, here indicated by D; and in no. 386, where Dehlí occurs with no prefix, and 328-331, where it is written الدهلی, and 800-805, where the Persian forms در دهلی or در تخت گاه are used.

NOTE.

THE preceding table has been compiled from Professor F. Wüstenfeld's *Vergleichungs-Tabellen der Muhammedanischen und Christlichen Zeitrechnung*, Leipzig, 1854, which are identical with those given in Prinsep's *Useful Tables*, except that Prinsep adopts the English date of changing from the Old (Julian) to the New (Gregorian) style, and consequently omits 11 days on September $\frac{3}{14}$, 1752; while Dr. Wüstenfeld makes the alteration of 9 days on the day when all Catholic Europe adopted the decision of the Bull of Pope Gregory XIII., viz. $\frac{5}{14}$ October, 1582. As this is obviously the most general and proper date for the change of style, I have adopted Dr. Wüstenfeld's principle, and have not deferred a chronological change, which was adopted in 1582 by the chief nations of Europe of the time, until the necessity of the reform had at last been understood in England.

The second column gives the Christian day and month in which the Hijrah year begins.

The Muhammadan year consists of 354 days, with an intercalary day added to the last month eleven times in thirty years (on the 2nd, 5th, 7th, 10th, 13th, 15th, 18th, 21st, 24th, 28th, and 29th years of every thirty years). To find whether the intercalary day is to be added to any given year, divide the year by 30, and if any of the above numbers—2, 5, 7, 10, &c. —remain over, the year is one of 355 days. E.g. 30 divides 1303 forty-three times, with 13 over; therefore the Muhammadan year 1303, corresponding to our 1885-6, will contain 355 days.

To find the exact Christian day corresponding to any given Muhammadan day is a simple matter of calculation. After due regard to the year being Leap-year or not, the Muhammadan equivalent is obtained by reckoning up the days of the month, allowing 30 for Muharram the first month, 29 for Safar the second, and so alternately 30 and 29 to the end, when the intercalary day must be remembered. E.g. 21 November, 1884, is 31 days over the beginning of the Muhammadan year 1302, and would therefore be the 1st of Safar, 1302.
